EDUCATION

University of North Carolina at Chapel Hill

B.S. Computer Science

Expected Class of 2028

- Admitted into Accelerated Research Program
- Relevant Coursework: Algorithms and Analysis (COMP 550), Computer Organization (COMP 311), Foundations of Programming (COMP301), Systems Fundamentals (COMP211), Linguistic Variation and Language Change (LING202), Discrete Mathematics (MATH381), Linear Algebra (MATH347), Research Beyond Academia (IDST198)

EXPERIENCE

Society-Centered AI Lab (SAIL)

Undergraduate Research Assistant

Summer 2026–present

- Research machine learning and social computing on collaborative team of faculty and students
- Develop multi-agent human-AI collaborative system for environmental justice engagement

MURGe Lab

Undergraduate Research Assistant

Fall 2024–Spring 2026

- Research rationality and calibration of AI large language models on cross-institutional team of faculty and students
- Language model inference and finetuning

EXTRACURRICULARS

Sunrise Movement, UNC Chapel-Hill

Research Lead

Spring 2026–present

- Oversee research team and serve on executive board

Member, Research Team

Fall 2024–present

- Participate on team to research environmental justice issues, e.g. cogeneration and transportation

AI@UNC

Member, Primary Track

Fall 2024–present

- Participate in university club geared toward exploring and applying Artificial Intelligence
- Participate in AI@UNC book club to read and discuss works on AI technology and ethics

Presenter, AI@UNC I/O

Spring 2024

- Present research poster on rationality of AI large language models to students, faculty, and industry professionals at end-of-year conference

PROJECTS

[Durham Beat the Heat: Tree Canopy Impact \(HackNC 2025\)](#)

- Created interactive web application for visualizing urban heat patterns in Durham, NC and exploring the cooling effects of tree canopy coverage

[Stuck in the Smoke–UNC’s Coal Plant and Solutions for a Green Transition](#)

- Coauthored Sunrise UNC research report detailing why UNC still operates a coal plant, its negative effects, and solutions for replacement

SKILLS

Python, Java, C, HTML/CSS/JavaScript, Git, Linux, Huggingface Transformers/PyTorch
Scientific research and writing, Qualitative research, Data visualization
